

Dynamic Intrusion Response

An enterprise-wide solution to detect and prevent security threats

Customer Benefits

- Implementation planning by uniquely qualified experts experienced in the design and deployment of Dragon® security solutions and NetSight® software implementations
- Experienced professionals will work with IT staff to develop achievable goals that will immediately solidify corporate security stature
- Efficient installation of new products with minimal disruption to IT and business operations
- Hands-on product implementation by a certified professional to provide the knowledge needed to understand the solution and its functionality, as well as customer support contact methods
- Immediately benefit from a security design that will detect, locate and remediate network threats conceived specifically to meet the requirements of your acceptable use policy
- If applicable, provide necessary training to IT personnel to allow them to operate custom scripts necessary for the remediation of third-party devices

Dynamic Intrusion Response (DIR) uses a combination of Enterasys' award-winning Dragon Security Suite of intrusion detection technologies and the location services offered by the NetSight Automated Security Management software to provide a distributed intrusion prevention system that can isolate network threats at their source to mitigate possible network damage without adversely affecting vital network services.

Enterasys Professional Services and our certified partners are security subject matter experts with targeted strengths in the design and deployment of Secure Networks™. We will work directly with your network specialists and security personnel to plan, design, implement and operate your Dynamic Intrusion Response solution.

End-to-End Solutions and Expertise

We deliver service in a phased approach that begins with an assessment of the current environment—people, process, business and network issues—and moves through the phases of designing, implementing, migrating and managing a customized network to meet your unique requirements.

Scope of Service

- Meet with enterprise network and security staff to define overall deployment goals
- Collect current enterprise network map to guide Dragon Security Suite design and implementation
- Collect details of third-party switch deployment and customized response details
- Collaborate with enterprise security staff to determine installation locations for Dragon devices
- Agree on the final installation and deployment verification checks to validate operational DIR system
- Determine installation and full deployment milestone dates
- Implement the agreed upon design, including Dragon Security Suite and NetSight components
- If applicable, create and install scripts necessary for remediation of third-party devices
- Provide configuration and operational training on DIR solution
- Perform final installation and deployment verification checks
- Provide Dragon security tuning guidance
